Team Details

a. Team name: **[Your team name]**
b. Team leader name: **[Your full name]**
c. Problem Statement: **Retail & Commerce: Intelligent Customer and Business Experiences. Etalase makes WhatsApp & Instagram sellers discoverable and buyable by AI shopping agents**

Brief about the idea

Etalase turns a WhatsApp seller's product photos and chats into a storefront that AI shopping agents and ordinary shoppers can find and buy from, with every order landing back in the seller's chat.

Why now

AI agents already check out through Google's Universal Commerce Protocol (UCP) in the US; Australia (select retailers) and India (limited test) follow, Indonesia has no date. Morgan Stanley expects US$190–385B of US online spending via shopping agents by 2030. Platforms open only their own merchants to agents.

The problem

Agents only read structured catalogs. Across Southeast Asia, small sellers run on chat apps such as WhatsApp, LINE, Zalo and Messenger, with catalogs in photos and messages, so agents cannot see them. When agent checkout arrives, that demand flows to marketplaces and big brands instead.

Our solution

Gemini builds the catalog from photos, voice notes and spreadsheets. Etalase publishes it over MCP, the UCP checkout API and a store link that works today without an agent, reserves stock, takes QRIS payments and holds the payout through a return window. The seller confirms and ships from WhatsApp or Telegram.

US$185B

Southeast Asia e-commerce GMV in 2025; consumer interest in AI is 3× the global average

95%

of Indonesian online businesses sell through chat apps such as WhatsApp; only 18% use marketplaces (BPS, 2023)

~1 in 2

Southeast Asian shoppers have bought or sold on social media or messaging apps (2019 survey)

11%

of small and mid-size merchants are ready for AI shopping agents, vs 19% of large merchants (2026)

Opportunities

How is it different?

- Agent-readiness tools (Era, ShopAgentic, AgentReady) serve Shopify-style stores that already have product data
- Marketplaces and platforms make sellers agent-ready only inside their own ecosystem, at their fees
- WhatsApp chatbots answer human buyers, not AI agents
- **Etalase serves sellers with no store system and opens them to any agent via open protocols, and to shoppers via a store link**

How does it solve the problem?

- Builds the catalog from what sellers already have: photos, voice notes, chats, spreadsheets
- Publishes it in agent-readable form (MCP tools, UCP checkout API, schema.org) and as a store link anyone can open
- Runs a safe checkout: stock reservation, seller confirmation, QRIS, courier rates, and a payout held until the return window ends
- Keeps the seller in WhatsApp (or Telegram), with no new app to learn

USP of the solution

- **From WhatsApp photos to an agent-ready catalog in minutes**
- Brings chat-first micro-sellers into AI commerce with a channel they own, paid only per order
- One core with pluggable country packs for payment, shipping and OMS
- Privacy by design: tenant-isolated AI and minimal data, built with Indonesia's PDP Law in mind

List of features offered by the solution

AI catalog builder

Built

Gemini reads product photos, voice notes, captions and CSV files, then drafts products, variants, prices and weights for the seller to confirm.

Agent-ready storefront

Built

Each shop speaks MCP, UCP and schema.org, scores 0–100 for agent readiness, and has a mobile store link for buyers without an agent.

WhatsApp seller agent

Built

An ADK agent updates stock and prices and handles orders and tracking, on WhatsApp or Telegram. Buttons never go through the model.

Safe agent checkout

Built · QRIS mocked

Stock is reserved at checkout and low-confidence stock is confirmed with the seller first: 0 units oversold when 100 buyers race.

Shipping & payouts

Mocked in demo

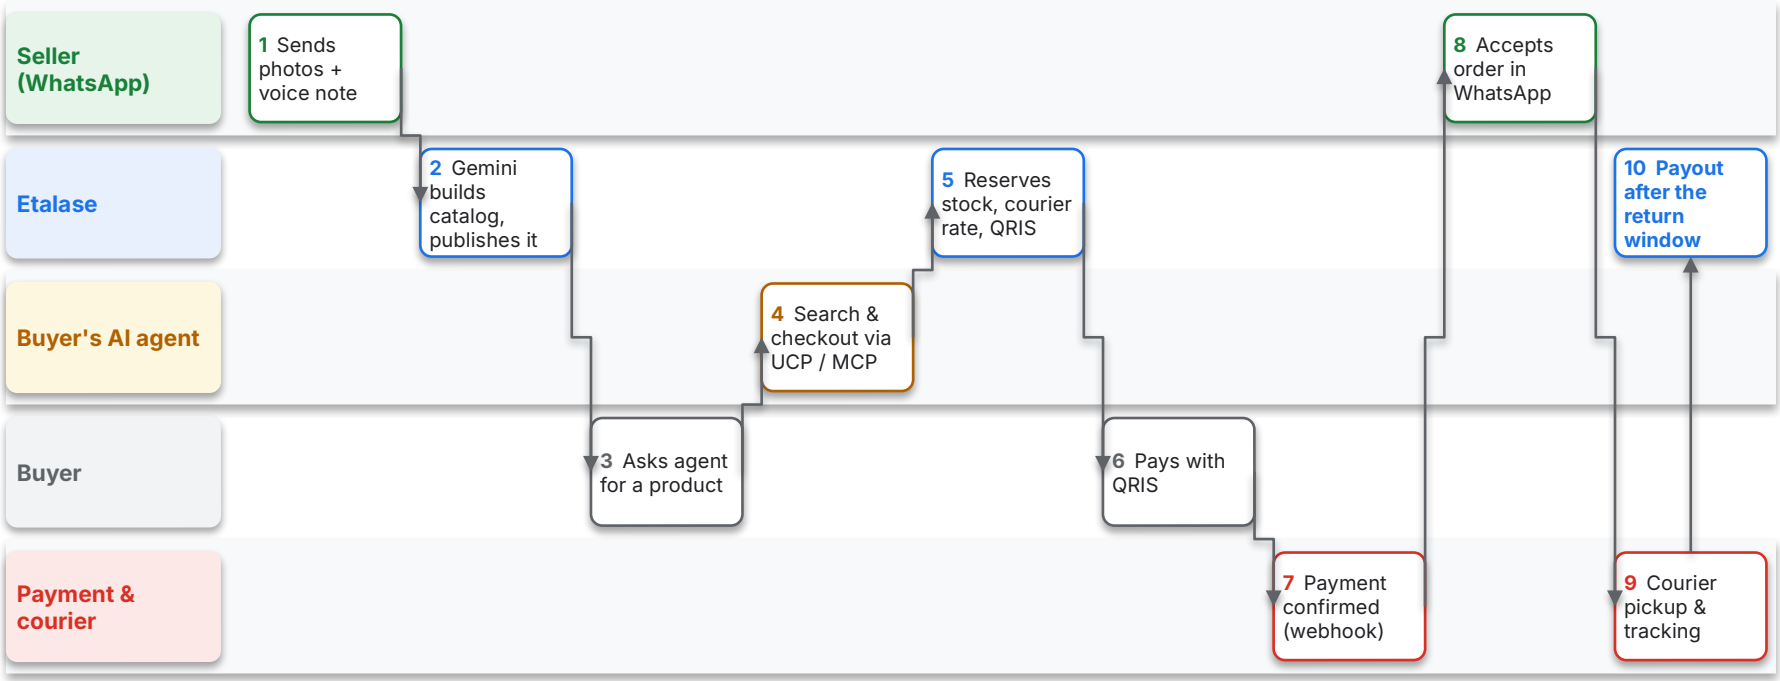

Courier rates; the payout waits out a return window, then is released minus commission. Biteship and Xendit are wired; the demo uses mocks.

Connectors

Built · more next

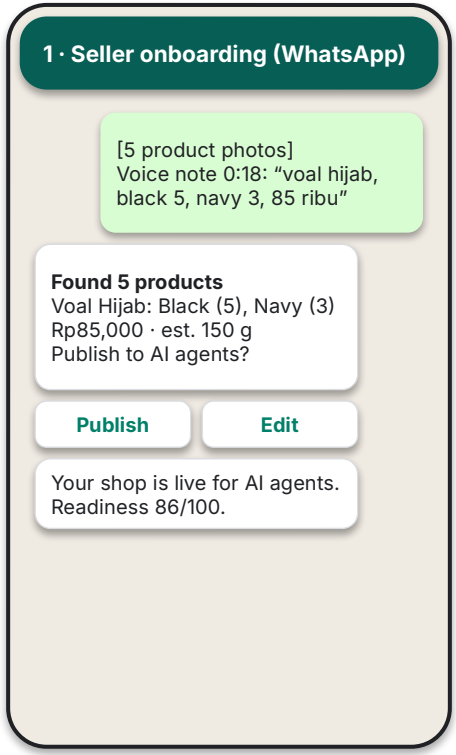

Instagram post import and an OpenAPI Connector API for website builders work today. Google Sheets, OMSs and WooCommerce come next.

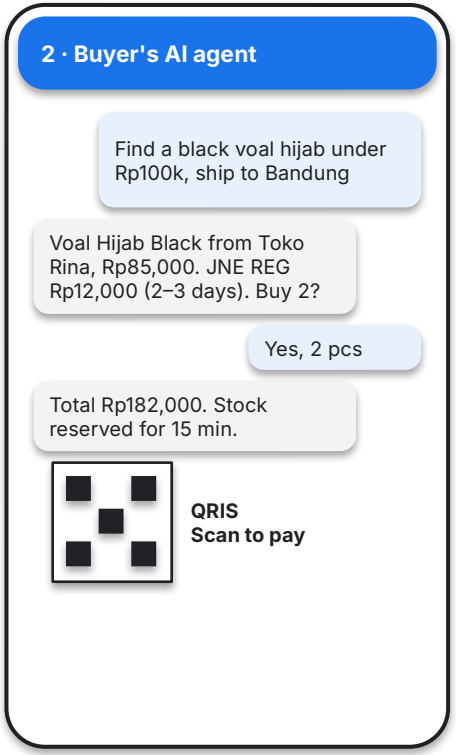

Process flow diagram or Use-case diagram

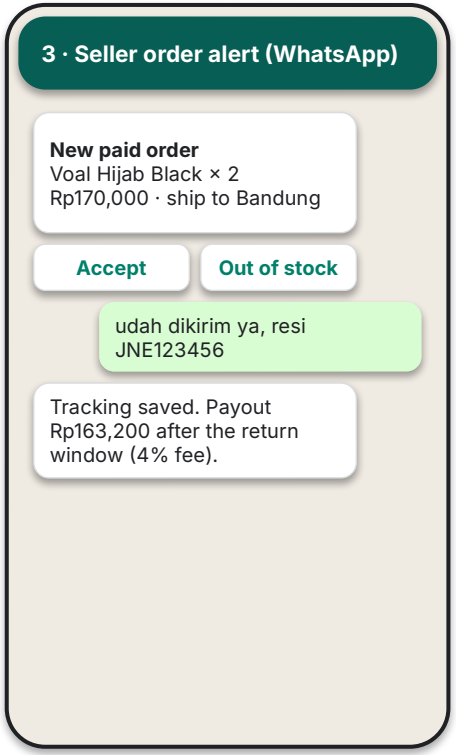

A buyer without an agent opens the store link and follows the same steps from 5. If stock confidence is low (stale or nearly sold out), the seller confirms stock before the QRIS link is sent. Stock reservations expire after 15 minutes if unpaid.

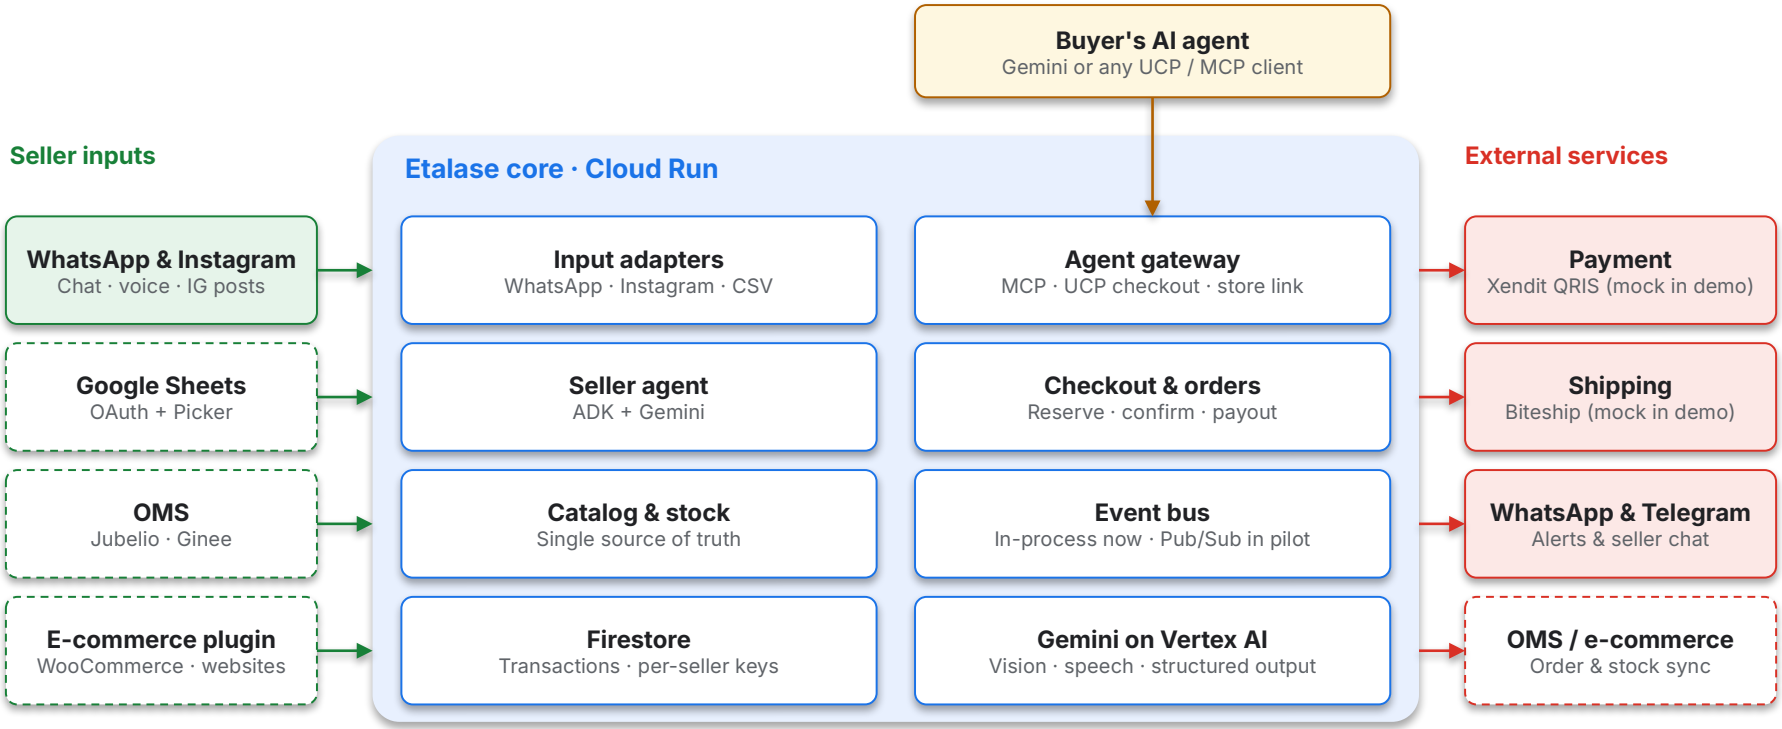

Wireframes/Mock diagrams of the proposed solution (optional)

Architecture diagram of the proposed solution

Solid = hackathon MVP · dashed = roadmap. Country pack = { currency, payment, shipping, tax } adapters: a new market adds one config entry, not a new core. Each seller has one stock owner: Etalase, the OMS or the store.

Technologies to be used in the solution

AI & agents

- Gemini on Vertex AI: photos, voice and text to catalog with structured output
- ADK seller agent with tenant-scoped tools
- ADK buyer agent calling our MCP tools (demo)

Agentic commerce

- MCP server: search, shipping, checkout, status
- UCP profile and checkout API (/ucp/v1)
- schema.org data and store link
- Next: Merchant Center feed, AP2 payments

Google Cloud runtime

- Cloud Run: API, MCP, webhooks, dashboard
- Firestore store with transactions
- Secret Manager for every key
- Pilot: Pub/Sub, Cloud Tasks, Storage, KMS

Integrations

- WhatsApp Cloud API and Telegram Bot API
- Xendit QRIS and Biteship adapters
- Instagram API (catalog import)
- OpenAPI Connector API

Seller dashboard

- Lightweight web dashboard on Cloud Run
- One-time-code sign-in over chat
- Readiness, orders, returns, payouts

Security & operations

- Tenant isolation, including AI context
- Signed webhooks, fail-closed startup checks
- Rate limits, OTP lockout, CSP
- Built with Indonesia's PDP Law in mind

Estimated implementation cost (optional)

Pilot assumption: 100 sellers · 3,000 products · 1,000 orders per month. Rough estimates, to be validated with the Google Cloud Pricing Calculator.

Component	Basis	Est. / month
Cloud Run, Firestore, Storage, Pub/Sub	Low pilot traffic, mostly within free tiers	US$10–30
Gemini on Vertex AI	~3,000 catalog extractions + ~2,000 seller-agent turns (buyers' agents run on their own models)	US$15–60
WhatsApp Cloud API	~4 utility messages per order × 1,000 orders at ~IDR 366–460	~US$90–115
Biteship rates API	~5,000 rate checks at ~IDR 5 each	< US$2
QRIS payments	0% MDR for micro sellers ≤ Rp500k (Bank Indonesia); gateway fee paid by buyer	Pass-through
Total platform cost		**≈ US$120–210**

Unit economics per order

≈ IDR 2–3.5k

platform cost per order in the pilot (WhatsApp is most of it)

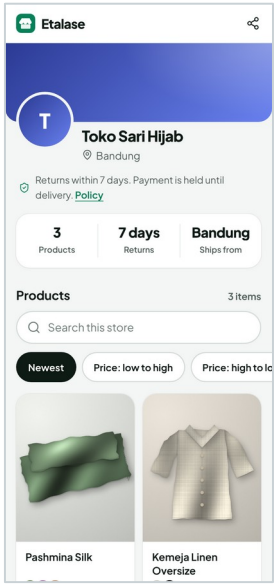

IDR 6.8k

commission at 4% on an IDR 170k order. Sellers pay only when an order sells.

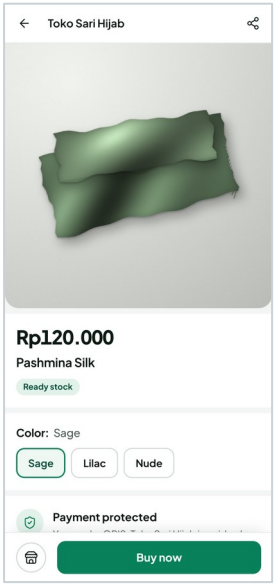

Price references: Meta WhatsApp Business Platform per-message pricing (utility rate in Indonesia via Qontak, Oct 2026); Biteship Rates API pricing; Bank Indonesia QRIS MDR rules (Kontan, Oct 2026); Vertex AI Gemini 2.5 Flash list prices. FX: US$1 ≈ IDR 16,000. Meta's October 2026 rules for service messages are unconfirmed; Telegram has no per-message fee. Details: docs/10.

Prototype Performance report/Benchmarking

389 automated tests pass today (stock races, payments, returns, webhooks, OTP abuse) and an end-to-end run over real HTTP. TBD results come from the Gemini run on Cloud Run.

Metric	How we measure	Target	Result
Catalog extraction accuracy	50 labelled products: title, variant, price, stock	≥ 90% of fields correct	TBD
Catalog build time	Photos + voice note to published product	< 15 s per product	TBD
Agent tool latency	p95 of search_products and create_checkout	< 2 s	TBD
Overselling under load	100 concurrent reservations for the last unit	0 units oversold	Pass (in-memory)
Seller alert speed	Payment webhook to WhatsApp message	< 5 s	TBD
Duplicate & late payments	Same event twice; payment after expiry	No double change; auto refund	Pass
Returns and the payout hold	Refund before the payout; silent seller; courier-returned parcel	Refund never depends on the seller	Pass
Stock-update understanding	Intent accuracy on 100 real seller messages	≥ 95%	TBD

Additional Details/Future Development (if any)

1

Hackathon MVP

- WhatsApp, Telegram, Instagram, CSV
- MCP, UCP checkout, store links
- Demo buyer agent on Gemini (ADK)
- Payout hold and returns; mock QRIS and courier

2

Indonesia pilot

- 50–100 sellers onboarded
- Firestore, Pub/Sub, Cloud Tasks
- KYC and payouts via sub-accounts
- Sheets sync, Merchant Center feed

3

More channels

- OMS adapters: Jubelio, Ginee
- E-commerce plugins, WooCommerce first
- Shopee and TikTok Shop API sync
- Sales analytics for sellers

4

Regional

- Country packs: MY, PH, TH, VN
- More chat adapters: Instagram DMs, LINE, Zalo
- Stripe in supported markets
- Cross-border shipping and duties

What we will validate next

Seller willingness to pay per order and to wait for the payout · return rates · whether buyers arrive through agents or the store link · timing of UCP checkout in Indonesia · payment licensing through partners, so Etalase never holds seller funds · stock accuracy for sellers who do not track stock
